

Renovate or Replace...

the Process of Long-Range Planning for Mid-Century Buildings

Housing Facilities Conference

THURSDAY, OCTOBER 14, 2010

Session # 905

COLLINS COOPER CARUSI *Architects*

TODAY'S SESSION

- ❖ Introductions
- ❖ What Makes Mid-Century Halls Such a Unique Challenge
- ❖ Planning Process: Bringing Mid-Century Halls into the New Century
- ❖ Discussion

WHO'S WHO...

Brad Noyes – Brailsford & Dunlavey

- ❖ Vice President...17 years with the firm
- ❖ Directs B&D Charlotte Office
- ❖ Involved in more than 200 projects, more than 50% in Higher Education

Jeffrey Juliano – Collins Cooper Carusi Architects

- ❖ Principal with more than 20 years with firm
- ❖ Directs firms University Housing studio
- ❖ Involved in the planning and design of more than 2.5 million square feet of campus housing

MID-CENTURY HIGHER EDUCATION: ENROLLMENT & FACILITIES SOAR

- ❖ Social change & enrollment growth began in the late 1940's and lasted through the mid-1960's
- ❖ Passage of the G.I. Bill (1944) & Title IV of Housing Act (1950) increased student populations across the country with larger numbers of “typical” students, as well as more women, persons of color & older students
- ❖ Higher Ed. Facilities Act of 1963 extended government support for developing housing facilities just as the enrollment of women began to grow...resulting in the “twin towers” phenomenon

CHARACTERISTICS OF MID-CENTURY RESIDENCE HALLS

❖ **Planned & Built Quickly**

Accommodating rapidly-growing student enrollment meant high density was the name of the game...didn't address the social or academic experience

❖ **Minimal Amenities**

Small rooms, community baths, limited privacy, 1-2 laundry rooms/kitchens per building

❖ **Limited Common Space**

Usually single large gathering lobbies/lounges, but not very warm & not nearly enough small study space

❖ **Systems**

Single point of control, no individual control with unit

❖ **Structures**

Often poured-in-place concrete with masonry infill & “common walls.

❖ **Envelope**

Single-pane glazing systems, limited insulation, weak storm water management control.

HIGHER EDUCATION IN A NEW CENTURY

Universities now face a range of issues with these facilities:

- ❖ Debt is often retired, so building revenues are supporting debt service, maintenance/improvements—maybe even operations—for other housing buildings
- ❖ M/E/P systems are inefficient, often hard to service & thermal comfort difficult to manage
- ❖ Facilities do not support today's technological requirements
- ❖ Condition & design are not consistent with expectations of incoming students & their parents, nor with institutional leaders/Board for supporting recruitment & learning
- ❖ Emerging price sensitivity due to overall cost of education coupled with perceived lack of value from Mid-Century facilities

PLANNING PROCESS: QUESTIONS FOR PROJECT INITIATION

❖ Facilities Assessment

- What are the conditions of existing systems: code, life safety, envelope, utilities?
- How do the buildings & their sites reconcile with future campus plans?

❖ Departmental Mission & Goals

- How does the current design support or hinder the educational goals?
- Do the buildings support: community building, aesthetic / quality of space, flexibility, technology?

❖ Community Impressions

- What impressions are created for students and parents?
- What is the administration's impression?

❖ Financial Implications

- Operating costs, Debt service, 1st Cost vs. Life Cycle Costs

❖ Sustainability

- What strategies are realistic for us to consider?
- What are the University standards: LEED vs. Sustainable?

❖ Implementation

- Can a percentage of rooms—or even an entire building—go off-line?
- Can swing space be created elsewhere?
- How can the work be phased?

PLANNING PROCESS: WHERE TO BEGIN?

Approach

Phase I - Understanding

Understanding the Working Conditions

Phase II - Analysis | Strategy

Developing the “Big-Ideas”

Phase III - Concept Development

Defining the Preferred Concept

PLANNING PROCESS: PHASE I

Understanding

- ❖ Formulate & Document Project Goals & Objectives
 - Strategic Asset Valuation (SAV) Process
- ❖ Evaluation of Existing Conditions
 - Tours & Inspections of High-Rise Halls
 - M/E/P & Structural Review (including previous reports / data) & owner operational issues
 - Site Analysis Focusing on Opportunities & Constraints for Improvements
- ❖ Research Key Student Housing Market Factors
 - Focus Groups & Interviews
 - Benchmarking with Cross-applicant & Peer Institutions
 - Survey Student Community for Cost & Amenity Sensitivities
 - Create Demand Model (Unit-type Demand & Occupancy Projections per year per unit type)
- ❖ Develop Financial Model (Variables: Unit Configuration, Revenue Potential, Construction Cost Projections, Phasing & Financing)

EXISTING CONDITIONS FINDINGS

Hall #1

Built: 1966

General Information:

- ❖ Total Gross Square Feet: 210,484
- ❖ Square feet per Bed: 225
- ❖ 935 Beds: 1st-Year Women student-focused
- ❖ Nine floors: 1 - Student Services offices & 2-8 - residents
- ❖ Double-occupancy rooms with community bath per wing
- ❖ Structure: Concrete frame with brick veneer exterior & non-thermally broken windows

Findings:

- ❖ Well Maintained: No major Renovations/Upgrades, so starting to show typical signs of age
- ❖ Exterior Envelope & Roof: Water Infiltration issues
- ❖ Life Safety, ADA & Code issues: Upgrading required
- ❖ Structural Systems: No reported problems
- ❖ HVAC: Galvanized, 2-pipe system has corrosion issues
- ❖ Plumbing, Electrical & Fire Protection: Building systems require upgrading

EXISTING CONDITIONS FINDINGS

Hall #2

Built: 1963

General Information:

- ❖ Total Gross Square Feet: 188,149
- ❖ Square feet per Bed: 195
- ❖ 965 Beds: 1st-Year Women & Men
- ❖ Nine floors: 1 - Student Services offices & 2-8 - residents
- ❖ Double-occupancy rooms with community bath per wing
- ❖ Structure: Concrete frame with exterior non-thermally broken porcelain enamel panel glazed curtain wall system

Findings:

- ❖ Well Maintained: No major Renovations/Upgrades, so starting to show typical signs of age
- ❖ Curtain Wall & Roof: Water Infiltration issues
- ❖ Life Safety, ADA & Code issues: Upgrading required
- ❖ Structural Systems: No reported problems
- ❖ HVAC: Heat/Cool are separate systems & require replacing
- ❖ Plumbing, Electrical & Fire Protection: Building systems require upgrading

EXISTING CONDITIONS FINDINGS

Hall #3

Built: 1965

General Information:

- ❖ Total Gross Square Feet: 230,312
- ❖ Square feet per Bed: 236
- ❖ 975 Beds: 1st-Year Women & Men
- ❖ Ten floors: 1 - Student Services offices & 2-9 - residents
- ❖ Double-occupancy rooms with community bath per wing
- ❖ Structure: Concrete frame with brick veneer exterior & non-thermally broken windows

Findings:

- ❖ Well Maintained: No major Renovations/Upgrades, so starting to show typical signs of age
- ❖ Exterior Envelope & Roof: Water Infiltration issues
- ❖ Life Safety, ADA & Code issues: Upgrading required
- ❖ Structural Systems: No reported problems
- ❖ HVAC: Galvanized, 2-pipe system has corrosion issues
- ❖ Plumbing, Electrical & Fire Protection: Building systems require upgrading

Phase I - Understanding

Existing Building Analysis

DEMAND ANALYSIS

Undergraduate Demand Assumptions

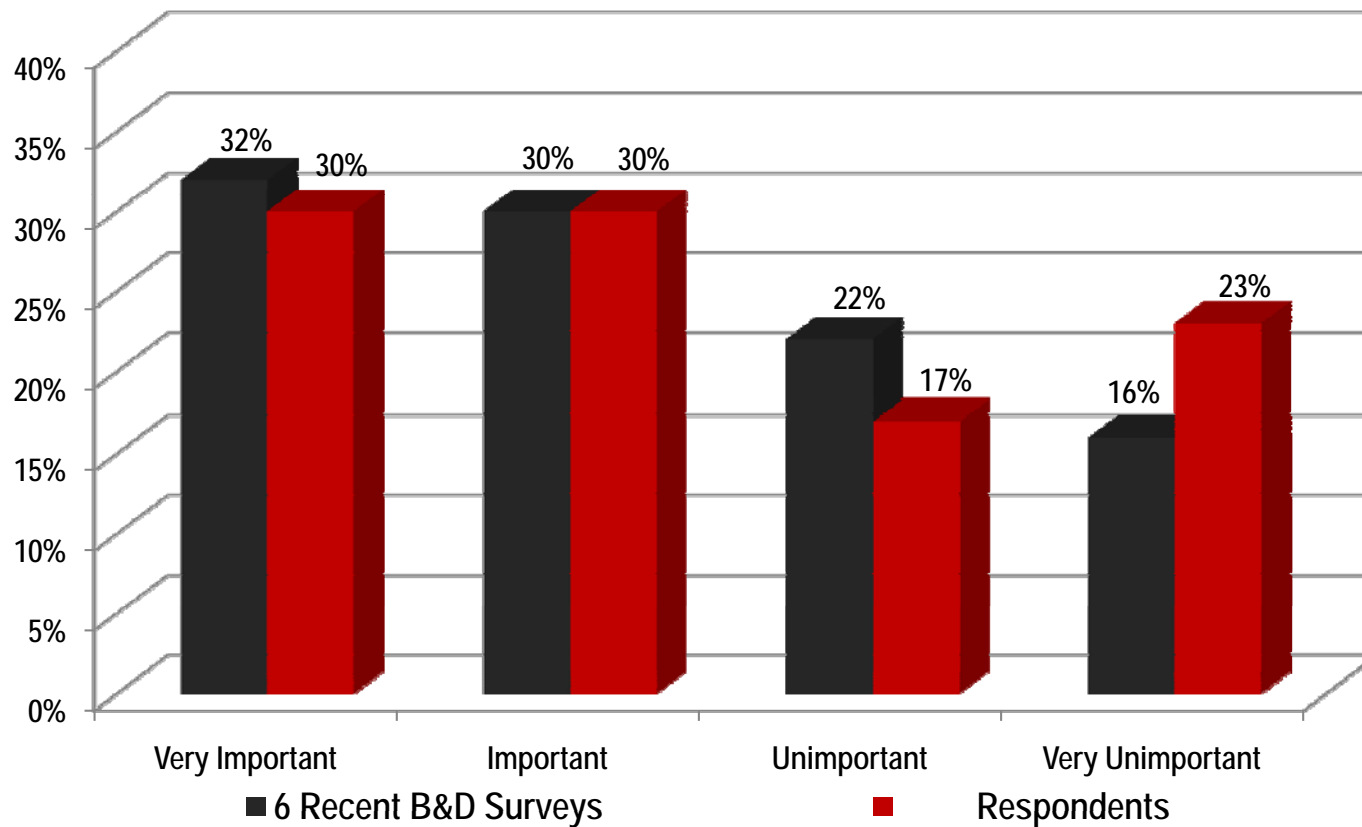

- ❖ No Enrollment Growth: ~ 26,000 Undergraduate Students
- ❖ Increased Freshman Capture: 96% to 99%
- ❖ OCR: Traditional – 1.2; Semi-Suite – 1.3; Super Suite – 1.4; Apt – 1.5
- ❖ Filtered: < 25 years; Paying > \$400; Trad. Living Arrangement

Undergraduate Demand Overview

<u>Class</u>	<u>Current Demand</u>	<u>Current Capture Rate</u>	<u>Potential Demand</u>	<u>Potential Capture Rate</u>
<i>Freshman Year</i>	4,752	96%	4,935	99%
<i>Sophomore Year</i>	1,005	17%	2,168	37%
<i>Junior Year</i>	594	9%	1,890	28%
<i>Senior Year</i>	417	5%	1,316	16%
<i>Total</i>	6,768	26%	10,308	40%

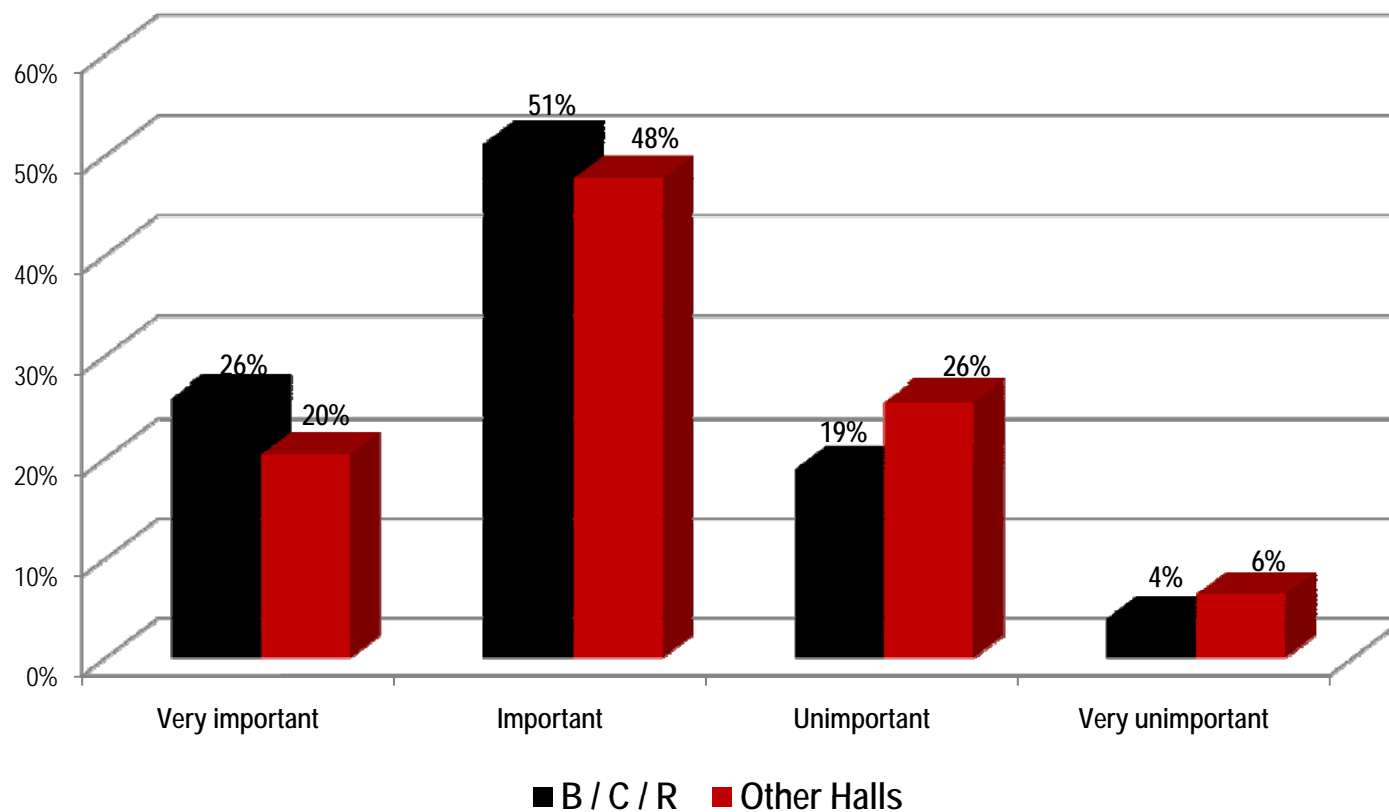

DEMAND ANALYSIS

Q2. How important was the availability of on-campus housing in your decision to attend the University?

DEMAND ANALYSIS

Q21. How important are these halls to campus culture & traditions?

DEMAND ANALYSIS

Freshmen Demand for Traditional Units

	<u>Hall Bath (D)</u>	<u>Hall Bath (S)</u>	<u>Private Bath (D)</u>	<u>Private Bath (S)</u>
Units Demanded by Freshmen	584	725	701	195
% of Total Traditional Demand	26%	33%	32%	9%

DEMAND ANALYSIS

Rankings Potential Improvements

	Resident Room Improvements	Floor/Common Area Improvements	Building Amenity/ Interior Condition Improvements	Exterior Condition Improvements	
All Respondents	57.78%	28.50%	8.89%	4.84%	1st
	23.01%	45.88%	20.13%	10.98%	2nd
	15.03%	19.48%	49.41%	16.08%	3rd
	4.18%	6.14%	21.57%	68.10%	4th
#1, #2, #3 Respondents	56.34%	29.58%	8.45%	5.63%	1st
	22.07%	45.54%	20.89%	11.50%	2nd
	16.20%	17.84%	49.77%	16.20%	3rd
	5.40%	7.04%	20.89%	66.67%	4th
	Improve amenities for resident rooms including updated furniture/finishes and new lighting.	Improve amenities for each building's floors and wings including new lighting, more social lounges and quiet study spaces, as well as features such as kitchens and laundry rooms.	Improve amenities for each building's community areas including TV/social spaces, recreation areas, study areas and program/activity spaces - plus new lighting, painting, etc.	Improve the overall exterior conditions/architectural character of each building by adding new entryways, updated wall treatments, outdoor social/recreation features, landscaping, etc.

4th

PLANNING PROCESS: PHASE II

Analysis/Strategy

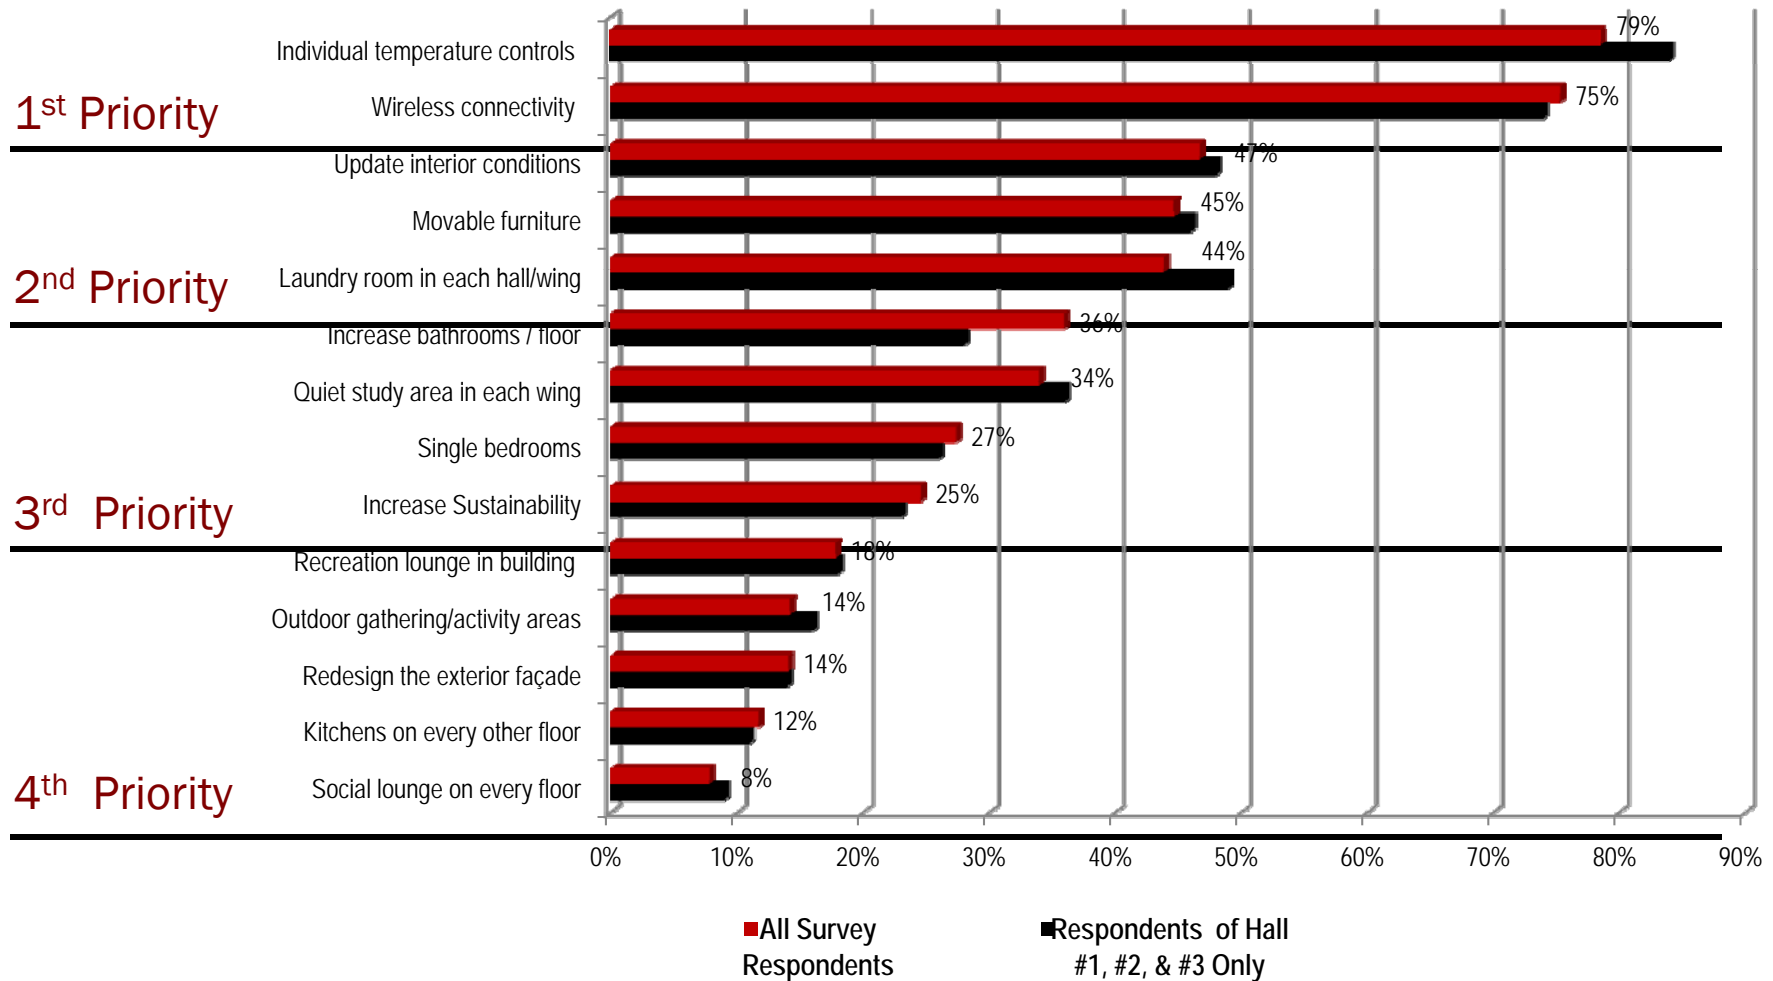

- ❖ Facilitate Design Charrette(s) with Stakeholders & Project Team
- ❖ Create & Evaluate a Range of Potential Design Solutions
- ❖ Generate Iterative Financial Scenarios for Conceptual Design Schemes
- ❖ Develop Sustainable Standards & Strategies
- ❖ Devise Phasing & Implementation Strategies
- ❖ Generate Budget Cost Estimate Based on Gross Square Footage

DEMAND ANALYSIS

Renovation Preferences

FINANCIAL MODEL

Development Cost Projections

PROJECT TYPE:

	<u>Light Renovation</u>		<u>Medium Renovation</u>		<u>Heavy Renovation</u>		<u>New Construction</u>	
	<i>Cost per SF</i>	<i>% of Total Costs</i>	<i>Cost per SF</i>	<i>% of Total Costs</i>	<i>Cost per SF</i>	<i>% of Total Costs</i>	<i>Cost per SF</i>	<i>% of Total Costs</i>
Hard Cost per SF (includes enclosed building, demolition, excavation & site preparation, site utilities & infrastructure, landscaping)	\$30	67%	\$105	80%	\$135	80%	\$175	80%
Soft Cost per SF (includes A/E fees, testing/survey fees, project contingencies, project management fees, and FF&E)	\$15	33%	\$26	20%	\$35	20%	\$50	20%
Total Project Cost per SF	\$45		\$131		\$170		\$225	
Average SF per Bed (B/C/R Only)	219 SF		219 SF		219 SF		219 SF	
Cost per Bed to Renovate	\$9,855		\$28,744		\$37,230		\$49,275	

Existing Building

**Debt capacity totals represent millions of dollars*

New Elevator Core

Maximize Building Area and Increase Bed Count

Consolidate Housing Offices into Single Location

Increase Campus Density

Colony Connectivity

PLANNING PROCESS: PHASE III

Concept Development

- ❖ Develop Program of Requirements for the Preferred Solution
- ❖ Reconcile Phasing Plan to Financial Model for Preferred Solution
- ❖ Develop a 30-Year Operating Model for the Renovated High-Rise Halls in context of the Housing System Financial Requirements
- ❖ Develop Life Cycle Energy Analysis Compare Various M/E/P System Options
- ❖ Generate Capital Cost Development Budget, inc. Expenditures by Phase and FF&E Estimates
- ❖ Create Architectural Concept Plans with Unit Types, Bed Counts, Building Massing/Elevations, Concept Site Plan & Floor Plans
- ❖ Develop Draft Narratives for Architectural, Civil, Structural, and M/E/P/FP as well as Construction Schedule & Phasing Approach
